

Use ASE's Disaster Recovery Service for servicing your organization backup printing needs

*Transform Print!*

*Secure LPR over the Internet!*

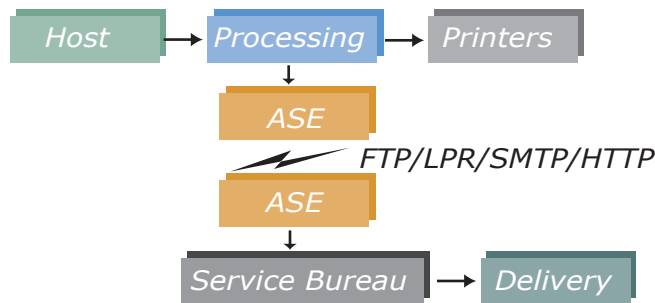

**Easy to Implement!**

With ASE's DR service, clients have the ability to offload the printing of production print in the event of a disaster. Using a combination of services and software ASE' DR Service is a comprehensive offering for organizations with DR needs. ASE has formed relationships with several service bureaus for the physical printing service. ASE's own Print Management and print data transformation software is used for any data processing requirements

**General Overview**

In the event of an emergency, client will send print data to ASE for distribution to a selected service bureau. Using a distribution model consisting of ASE software, the print data will be LPR'd, FTP'd or sent via SMTP to an ASE server in another location. Then, using Service Bureaus that are part of the ASE network, the print data is delivered for printing and delivery.

**Disaster Recovery Model**

**Disaster Recovery Process**

**Approval Phase**

Working with the client and Service Bureau, ASE will run tests on the client's data. Client will sign-off on the printed output

**Processing Phase**

ASE will configure a server to process the data so that it will print according to the client's requirements. During this stage software may be required to be installed at the client's site. All work rules and resources will be configured and setup on the server for processing.

**Deliver Phase**

Procedures will be established for the means that printed output will be delivered to client or client's customers.
